~~TOP SECRET~~

SUBJECT: Report of Communications Security Violations

TO: Commander
U. S. Air Force Security Service
San Antonio, Texas

1. Attached is the quarterly (October through December 1954) compilation of communications security violations reported to or noted by this Agency which occurred in communications of those Air Force stations which handle COMINT traffic. You have been notified of completed evaluations of possible compromises which are reported herein as violations.

2. This report is furnished primarily for guidance in improving the security of COMINT communications. Similar reports are forwarded to Chief, Army Security Agency and Chief of Naval Operations. Upon request, additional copies of this report will be provided in sufficient quantity for dissemination to those activities under your Command engaged in COMINT operations.

3. Extracts from this quarterly summary may be classified SECRET if the extracts are restricted to lists of violations which involve messages classified no higher than SECRET. For example, the list of violations committed by an activity which originates messages classified no higher than SECRET may be extracted and forwarded to that activity as SECRET material. The key list is SECRET in classification.

1/1
declassified
4. This correspondence may be downgraded to SECRET upon removal of Inclosure 1.

FOR THE DIRECTOR:

C. M. MILLER, Jr.
Major AGC
Asst. Adj. Gen.

Declassified and approved for release by NSA on 05-15-2014 pursuant to E.O. 13526

2 Incls:

1. Communications Security Violations
by Air Force Stations. (10)
2. Key List of Air Force Violations. (10)

KEY LIST OF AIR FORCE VIOLATIONS

Oct., Nov., & Dec., 1954

ROTOR ARRANGEMENT

1. Use of a rotor arrangement for an inappropriate cryptoperiod, day or month. (Reference AFSAG 1262, para 5006a(1))
2. Use of a rotor arrangement from a key list assigned to another station. (Reference AFSAG 1262, para 5003b)
3. Use for encipherment of superseded rotors.

ROTOR ALIGNMENT AND MESSAGE INDICATOR

4. Discrepancy between the message rotor alignment resulting from decipherment of the message indicator and the message rotor alignment actually required to decipher the message, although the latter was correctly derived. The discrepancy involves (a) transposition of letters, (b) substitution of a letter alphabetically adjacent to the correct letter, (c) substitution of a phonetically similar letter, or (d) errors in encipherment.
5. Identical message indicators appeared on different messages (or transmission sections) enciphered on the same machine. Use of the message rotor alignment resulting from decipherment of the message indicator allowed decipherment of the first but not the second message. The message rotor alignment actually used for encipherment of the second message was properly tailed to the final alignment of the first message.
6. Failure to tail previously enciphered message. (Reference AFSAG 1262, para 6002a(4))
7. Omission or addition of one or more letters to the message indicator.
8. The message rotor alignment was transmitted in the clear as the last five letters of the message indicator. (Reference AFSAG 1262, para 6002a(5))

KEY GROUP

9. The trigraphic key-group indicator in the message indicator did not correspond to the key group actually used for encipherment. Reuse of a key group was not involved. (Reference AFSAG 1262, para 5004b)

MACHINE DESIGNATOR AND MULTISWITCH SETTING

10. The machine designator in the message indicator did not correspond to the multiswitch setting used for encipherment. The messages were (a) correctly enciphered or (b) incorrectly enciphered. (Reference AFSAG 1262, para 6002a(1))

11. Use of an unauthorized multiswitch setting. (Reference AFGAG 1262, para 6002a(2) and/or AFGAG 1231, para 6003a(1))

ENCIPHER DECIPHER CARD

12. Incorrect use of an ORCUS enciphering card to produce a message indicator. (Reference AFGAG 1262, para 5005c)
13. Use for encipherment of a noneffective ORCUS enciphering card.

ADDITIONAL VIOLATIONS

14. Transmission in the clear of classified information.
15. Transmission of classified information in monoalphabetic substitution cipher.
16. Transmission of a message in which there was faulty rotor stepping during encipherment. (Reference AFGAG 1262, para 6002a(3))
17. Transmission of a message containing an incorrect date-time group.
